

SAN FRANCISCANS FOR SAFE QUALITY WATER

OUR GROUNDWATER HAS HEALTH RISKS

There are unsafe levels of nitrates, manganese, radon-222, pesticides & herbicides in our groundwater. They increase our risk for cancer, serious illness & birth defects. Testing every few months won't help. Even "legal limits" are too high!

GROUNDWATER ISN'T NECESSARY.

Even with expected future growth & droughts, San Francisco can meet its drinking water needs well beyond 2040 with continued conservation and efficiency measures.

It's not an emergency water supply. A week after an earthquake or other disruption, a "Do Not Drink" order would be mandatory.

STOP WASTING DRINKING WATER ON IRRIGATION, FIREFIGHTING & STREET CLEANING

Use groundwater instead.

VOTERS WERE MISLED

Prop A was approved in 2004 for earthquake upgrades to our Hetch Hetchy system.

There was no mention of spending \$66 million to add polluted groundwater to our drinking water supply. We, the voters were misled by the SFPUC.
